Team PyNotebook Sprint 3 Planning Document

1 SPRINT OVERVIEW

1.1 OVERVIEW

This sprint will focus on overall cleanup and adding more lessons to the PyNotebook program. My contributions to the project for this sprint will include cleaning up the IDE design so that it fits with the project and ensure the system can loop after completed lessons.

1.2 TEAM LEADER

Chris O'Brien

1.3 SCRUM MASTER

Vincent Tran

1.4 RISKS/CHALLENGES

Handling git often comes with challenges especially when finalizing our integration such as merge conflicts. Since I am adopting tasks from use cases that the other team primarily worked with, understanding their system fully will avoid further issues.

2 CURRENT SPRINT DETAIL

2.1 USE CASE #4: USING IDE

As a beginner coding learner, I want to input code into a text box that will act as an IDE and run the code so that I can test before submission.

2.1.1 Tasks

Task description	Estimated time	Owner
Clean IDE format	5 hours	Andrew

2.1.2 Acceptance criteria

If this user story is implemented successfully, a student should be able to input their code, compile it, and submit to send to the controllers.

2.2 USE CASE #6: LESSON INTERFACING

As a student, I want a lesson so that I can learn about programming.

2.2.1 Tasks

Task description	Estimated time	Owner
Lesson Loop	3 hours	Andrew

2.2.2 Acceptance criteria

If this user story is implemented successfully, a student should be able to navigate through placeholder lessons.
